The electro-mechanical battery storage project uses compressed air storage technology. The project was announced in 2010 and will be commissioned in 2013.

BERLIN - Germany will become the first country to test a revolutionary energy storage system that uses underground salt caves as massive air batteries, with construction ...

The project results show that doubling or tripling the existing short-term storage capacity to up to 6.6 gigawatt hours would make sense for Berlin's district heating network.

To implement this project, not only advanced turbo machines but also an innovative high-temperature thermal energy storage concept has been required. The ...

Swedish public utility Vattenfall is about to start filling a 45m-high, 200MW-rated thermal energy storage facility with water in Berlin, Germany.

Vattenfall AB building a 200 MW thermal storage facility? Swedish utility Vattenfall AB is building a 200-MW thermal storage facility tied to a power-to-heat plan

Israeli company Augwind Energy today unveiled its plans for the first commercial AirBattery project in Germany. According to the company, the facility will be the world's first ...

"Giant thermos" in Berlin: A 45m-high, 56 million-liter, 2,600 MWh/200 MW thermal #energystorage facility is currently ramped up. Just in time to help with the looming gas ...

RWE Power is working along with partners on the adiabatic compressed-air energy storage (CAES) project for electricity supply (ADELE). „Adiabatic" here means: additional use of the ...

BERLIN - Germany will become the first country to test a revolutionary energy storage system that uses underground salt caves as ...
