Which Inverter should I Choose?

If you wish to use those items with an inverter, then choose a Pure Sine Wave inverter. If you mostly want to run lights, TV, microwave oven, tools, etc., a Modified Sine Wave inverter is fine for your needs. We often are asked if computers will work with Modified Sine Wave.

Can I run my power inverter without a deep cycle battery?

If you do not have a deep cycle battery, we recommend that you run the engine of your vehicle when operating the power inverter. When operating the inverter with a deep cycle battery, start the engine every 30 to 60 minutes and let it run for 10 minutes to recharge the battery.

How do you use a power inverter?

A very simple way to use an inverter for emergency power (such as during a power outage), is to use a car battery (with the vehicle running), and an extension cord running into the house, where you can then plug in electrical appliances. What size inverter should I buy? We carry many different sizes, and several brands of power inverters.

How do I choose a cigarette lighter inverter?

The small units also come with cables that can be clamped directly to a battery. If you want an inverter that will plug into your cigarette lighter, you must choose one that is 450 watts or less. Larger inverters (500 watts and over) must be hard-wired directly to a battery.

The inverter supplies 230V AC with a pure sine wave, so you are assured that all equipment will work with this. The 3000W inverter has a wide input ...

The inverter supplies 230V AC with a pure sine wave, so you are assured that all equipment will work with this. The 3000W inverter has a wide input range from 49V - 78V DC.

Use this table to decide what size and to use with your inverter. Remember the fuse and breaker are there to protect your cabling from overheating (and potentially catching fire).

No, a 60-volt inverter cannot be directly used with standard 12V or 24V battery systems without additional voltage conversion hardware.
