---

Beyond EVs, sodium-ion batteries could reshape global energy dynamics. With no reliance on lithium or cobalt, countries like ...

On December 31, 2025, Sodium Technology announced that its large-format (above 25 Ah) all-solid-state sodium-ion battery cell achieved an energy density of 348.5 Wh/kg, ...

Sodium-ion batteries use abundant and low-cost materials (sodium instead of lithium), with a projected cost of \$60-80/kWh by 2030 (China Battery Industry Association, 2024).

Abstract Sodium-ion batteries (SIB) have recently emerged as an alternative to current lithium-ion batteries (LIB), using low-cost and abundant raw materials. However, previous assessments ...

Sodium-ion batteries, developed with China's proprietary technology, offer higher thermal adaptability and greater raw material security. Their maximum output and response ...

As the world transitions to renewable energy sources, there is an increasing demand for home energy storage solutions. In this paper, we will explore sodium ion home battery, analyzing, ...

Compared with traditional lithium-ion (LiFePO4) systems, sodium-ion batteries offer lower cost, safer chemistry, superior low-temperature performance, and abundant raw-material supply, ...

The Baoci Energy Storage Station utilizes the world's first large-capacity sodium-ion battery developed in China, which boasts a response speed six times faster than existing ...

Amid rising tariffs, export restrictions and geopolitical tensions, the push for a resilient battery industry is gaining urgency. Sodium-ion is emerging as a promising alternative ...

Beyond EVs, sodium-ion batteries could reshape global energy dynamics. With no reliance on lithium or cobalt, countries like China, the U.S., and Europe could reduce ...
