According to the latest analysis from SolarPower Europe, Europe added 17.2 GWh of new battery energy storage capacity in 2023, a 94% increase over the previous year, ...

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing ...

LONDON, Feb 6 (Reuters) - Europe's battery storage capacity is expected to grow around five-fold by 2030, bringing with it increasing returns for energy majors, project developers and...

This initiative supports the EU's efforts to establish a circular battery economy, benefiting renewable energy storage by promoting more sustainable, long-lasting batteries. The EU is ...

The EU-funded MeBattery project aims to lay the foundations of a next-generation battery technology that will potentially help overcome the critical limitations of established flow and ...

A report from Solar Power Europe urges policymakers to prioritize battery storage through an EU Energy Storage Action Plan to ensure grid flexibility, especially after the Iberian ...

Years of strong solar growth and high gas prices have increased electricity price volatility across the EU, strengthening opportunities for battery storage. In turn, batteries can ...

Without urgent action, the EU risks stalling its energy transition. We are calling for a tenfold increase in battery storage by 2030. This is vital to sustain the rapid growth of solar and other ...

SolarPower Europe has officially launched the Battery Storage Europe Platform, a major new initiative to drive forward the business case and regulatory framework for battery ...
