How many hours a week do power plant operators work?

Most power plant operators, distributors, and dispatchers work full time, and some work more than 40 hours per week. They typically work rotating 8- or 12-hour shifts. Power plant operators, distributors, and dispatchers typically need at least a high school diploma or the equivalent to enter the occupation.

How do energy storage systems work?

Energy storage systems capture and hold energy for later use by shifting when and how electricity supply and demand are balanced. They're charged using electricity from the power grid during periods of low demand or extra capacity.

How many hours a week is a tour of duty?

Tours of duty for employees assigned to full-time training will be considered to be 40 hours per week, unless other specific hours are more beneficial to the Department.

How will energy storage impact New York?

Storage will increase the resilience and efficiency of New York's grid, which will be 100% carbon-free electricity by 2040. Additionally, energy storage can stabilize supply during peak electric usage and help keep critical systems online during an outage. All of this while creating an industry that could employ at least 30,000 New Yorkers by 2030.

(3) Tours of duty for employees assigned to full-time training will be considered to be 40 hours per week, unless other specific hours are more beneficial to the Department.

Under the 4-10 schedule, you work ten hours a day for four days each week (eight ten hour days in a pay period). Work days for either work schedule will commence no earlier than 6:30 a.m. ...
