Wind and solar use has grown to make up around a third of Europe's energy mix, but because these renewable sources are intermittent, they have also driven demand for ...

Global investment in EV batteries has surged eightfold since 2018 and fivefold for battery storage, rising to a total of USD 150 billion in 2023. About USD 115 billion - the lion's share - was for ...

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.

The trajectory for energy storage batteries in Europe and the United States points toward sustained growth, spurred by a combination ...

In the years ahead, storage will play a decisive role in making Europe's energy system more resilient, flexible, and ultimately more ...

In the years ahead, storage will play a decisive role in making Europe's energy system more resilient, flexible, and ultimately more affordable. The question is no longer ...

In line with their flexibility needs assessment, Member States must commit to setting clear storage targets within their National Energy and Climate Plans (NECPs), ensuring that energy storage ...

In this report, our lawyers outline key developments and emerging trends that will shape the energy storage market in 2025 and beyond.

Now, battery manufacturing in the US and Europe is at a critical juncture as governments in both regions seek to shore up domestic supply chains while competing with ...

The European Market Outlook for battery storage shows that growth comes from the rising demand for effective energy storage. This is key for using renewable energy sources ...
