Learn about negative voltage, when it's necessary, how to achieve it, and how to make a simple dual-rail supply.

Newmar provides power systems that accommodate positive and negative ground configurations. Our technical staff is well versed in these applications and can provide guidance in configuring ...

Since most telecommunications equipment at the site requires a DC voltage supply, the AC power from either the electric grid or the diesel generator is converted to -48 V DC by the rectifiers.

When incorporating batteries into sites, it is very important to be aware of which configuration the site is using. For positive-ground systems (-48 volts DC), the positive (+) line of the battery is ...

Learn how to install a -48V telecom power system step-by-step. This guide covers equipment selection, design considerations, wiring, and essential maintenance tips for reliable ...

It includes an overview of the power station, lists included parts, and provides a step-by-step installation procedure involving assembling parts, connecting batteries, connecting power, and ...

It includes an overview of the power station, lists included parts, and provides a step-by-step installation procedure involving assembling parts, ...

If you work with network gear housed in a telco facility, chances are you have DC power to work with rather than AC. What if you need to configure it before you do the final on ...

Connect the negative wire to the -48V connector on the DC power source. Important: As shown in Figure 1, the leads to the DC power supplies on the GigaVUE-HC2 node should attach from ...

The piece of equipment that has the 48 volt positive ground system will supply the power to the input of the converter. The converters input positive will be tied to the machine's ground and ...
