What is solar air conditioning?

Solar air conditioning, or "solar-powered air conditioning", refers to any air conditioning (cooling) system that uses solar power. This can be done through passive solar design, solar thermal energy conversion, and photovoltaic conversion (sunlight to electricity).

Are solar cooling and air-conditioning systems suitable for building applications?

Solar energy has been introduced as a crucial alternative for many applications, including cooling and air-conditioning, which has been proven to be a reliable and excellent energy source. This paper presents and discusses a general overview of solar cooling and air-conditioning systems (SCACSs) used for building applications.

How can solar energy be used to power cooling and air-conditioning systems?

Solar energy can be utilised to power cooling and air-conditioning systems by two methods: electrically and thermally. In the electrical form, photovoltaic (PV) panels convert the sunlight directly into electricity to run conventional cooling systems.

Is solar energy a good option for cooling & air-conditioning?

This is also associated with a vast amount of CO<sub>2</sub> emissions and other environmental concerns. Solar energy has been introduced as a crucial alternative for many applications, including cooling and air-conditioning, which has been proven to be a reliable and excellent energy source.
