What is an uninterruptible power supply (UPS) system?

Uninterruptible Power Supply (UPS) systems provide power to computer networks in the event of a power shortage or electrical outages so computers and other sensitive electronic equipment can be turned off properly. UPS system batteries keep systems running and help prevent data loss in the event of an unexpected shutdown.

Where are uninterruptible power supplies sourced?

Uninterruptible power supplies are sourced from trusted manufacturers. They're part of our collection of power supply products & protection devices, which protect a load from dangerous changes in power supply.

Does uninterruptible power supply USP provide surge protection?

Many models of uninterruptible power supply USP also provide surge protection. A surge protector blocks spikes in voltage so that they do not harm your electronics. So, your battery backup is always at work, protecting your desktop computer, network equipment, or other electronic equipment and charging its battery when not in use.

Why should you use an uninterruptible power supply?

You'll be glad for your uninterruptible power supply UPS the next time your typical power source fails during bad weather or due to an over-extended grid. You'll also be grateful when it saves your electronics from the bad effects of power surges, which can damage all kinds of electronics, including monitors and televisions.

Discover top manufacturers, pricing information and datasheets for uninterruptible power supplies today at Octopart!

About: o Stores energy to provide backup power during an outage. o Converts stored DC (direct current) power from the battery into AC (alternating current) power used by most devices.
