The energy storage industry walked a bumpy road in 2025, but eyes are turning toward 2026's tech stack. While lithium-ion remains dominant, pressure is building for longer ...

Adding bulk energy storage to New York's grid will lower costs, optimize the generation and transmission of power, enhance energy grid infrastructure, and ensure the ...

Leveraging its dominant position in electric vehicles, lithium batteries and solar panel manufactur­ing, China is now strategica­lly positioned to tap into new-type energy storage ...

Energy storage beyond lithium ion explores solid-state, sodium-ion, and flow batteries, shaping next-gen energy storage for EVs, grids, and future power systems.

Leveraging its dominant position in electric vehicles, lithium batteries and solar panel manufacturing, China is now strategically positioned to tap ...

Leveraging its dominant position in electric vehicles, lithium batteries and solar panel manufacturing, China is now strategically positioned to tap into new-type energy storage as a ...

Battery energy storage has become a core component of utility planning, grid reliability, and renewable energy integration. Following a record year in 2024, when more than ...

In two programmatic strategies, it recommends launching public education campaigns to promote clean energy adoption and acceptance, and scaling up solar-plus ...

We will proactively plan and strengthen top-level design, promote the scientific and efficient allocation of new energy storage in new energy bases, and promote the high-quality ...

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ...

On further promoting new energy storage
