Why optimization? In some sense, all engineering design is optimization: choosing design parameters to improve some objective Much of data analysis is also optimization: extracting ...

"Real World" Mathematical Optimization is a branch of applied mathematics which is useful in many different fields. Here are a few examples:

Convex programming studies the case when the objective function is convex (minimization) or concave (maximization) and the constraint set is convex. This can be viewed as a partic

OPTIMIZATION definition: the fact of optimizing; making the best of anything. See examples of optimization used in a sentence.
