What is container consolidation?

Container consolidation is when multiple smaller shipments are combined into a single larger shipment, generally a full container load (FCL). The practice helps reduce shipping costs and simplify logistics. These smaller shipments can't fill up a container on their own, so they're called a less than container load (LCL).

How can freight consolidation improve shipment efficiency?

With improved shipment efficiency, businesses can move freight at a manageable price point between markets, ensuring minimal waste while delivering goods on time. One key strategy for achieving shipment efficiency is freight consolidation. Freight consolidation is the process of shipping several shipments together in one container.

How can a freight forwarder help with container consolidation?

Container consolidation through a freight forwarder also speeds up the movement and delivery of your goods. These partners can move the entire container from a port to their warehouse location, such as Red Stag's Salt Lake City facility. Then, experts break down the container and store inventory on shelves.

How does a consolidated warehouse work?

That warehouse combines these smaller shipments into a single container. It ships from the Port of Shanghai to the Port of Los Angeles. The container goes to a warehouse for goods to be delivered to customers or split among warehouse (s) in that company's supply chain. Consolidation makes importing dramatically simpler, too.
