Peak shaving, or load shedding, is a strategy for eliminating demand spikes by reducing electricity consumption through battery energy storage systems or other means. In this article, we ...

The project at NYPA is using the energy storage system to demonstrate a peak shaving function that reduces the peak load typical of a commercial building.

The project results show that battery energy storage systems can have a role in reducing overall costs to New York's municipal electric departments. The savings come from allocation shifting, ...

Peak shaving, or load shedding, is a strategy for eliminating demand spikes by reducing electricity consumption through battery energy storage ...

Battery energy storage systems play a crucial role in peak shaving by storing excess electricity during off-peak hours and releasing it ...

This paper presents the results of a benefit-cost analysis involving the application of battery energy storage systems (BESS) for ...

The Praia grid-side energy storage project solves real-world problems while pushing the \$33 billion global energy storage industry into new territory [1]. This Portuguese ...

Energy storage is essential to a resilient grid and clean energy system. Learn about the types of energy storage, available incentives, and more.

The pilot project will help advance New York State's nation-leading climate and clean energy goals, including Governor Kathy Hochul's recently announced plans for a ...

Battery energy storage systems play a crucial role in peak shaving by storing excess electricity during off-peak hours and releasing it during high demand. When electricity ...
