-----

The waste-to-energy facility started processing waste in February 2023, with full operations expected by the end of the year. It has the capacity to convert up to 340,000 tons of waste into ...

State-owned power company Elektroprivreda Srbije plans to co-incinerate waste at the Nikola Tesla A thermal power plant in Obrenovac, some 30 kilometers southwest of the ...

The project, the first of its kind in Serbia, addresses one of the most urgent environmental challenges in Europe updating the City's existing waste management practices and enhancing ...

Serbia Cogeneration Power Plant - Replacing fossil fuel burners with Haiqi's proprietary biomass clean renewable energy, recovering valuable by-products (eg: biomass char, tar, acetic acid) ...

Abstract te (MSW) on a specific example of the future waste management center in Belgrade (Serbia). This waste management cente will be equipped with two plants for energy ...

The waste-to-energy facility started processing waste in February 2023, with full operations expected by the end of the year. It has the capacity to ...

This is where energy recovery from waste comes into play, serving two key purposes - reducing waste volume and its negative impact while creating opportunities for ...

The innovative design of the combustion system provides greater flexibility of the Stirling power generation system, which can realize the use of a variety of fuels including biomass gas and ...

Serbia has adopted various advanced technologies to extract energy from waste. These technologies include incineration, anaerobic digestion, and gasification. Incineration ...

By converting waste into usable energy, Serbia can diversify its energy sources and reduce its dependence on fossil fuels. Waste-to-energy technologies, such as incineration and ...

By utilizing domestic waste as a local energy source, Serbia reduces its dependence on imported fossil fuels for electricity and heat generation. Waste is available ...
