What is a PPA solar project?

In the PPA model, the solar energy system offsets the customer's electric utility bill, and the developer sells the power generated to the customer at a fixed rate, typically lower than the local utility. Below are resources to help you understand third-party ownership financing structures as a means to facilitate your solar project development.

What is third-party solar financing?

Third-party financing is a well-established financing solution in the United States, having emerged in the solar industry as one of the most popular methods of solar financing. Third-party solar financing predominantly occurs in two forms: solar leases and power purchase agreements (PPAs).

Can PPAs make economic sense for campus solar?

The National Renewable Energy Laboratory's fact sheet provides guidance to universities on the process of using PPAs and how PPAs can make economic sense for campus solar deployment. This document can support university stakeholders charged with the financial planning of campus solar projects.

What is a solar power purchase agreement (SPPA)?

A solar power purchase agreement (SPPA) is a financial arrangement in which a third-party developer owns, operates, and maintains the photovoltaic (PV) system, and a host customer agrees to site the system on its property and purchases the system's electric output from the solar services provider for a predetermined period.

Read our blog to learn how to leverage energy solutions financing and incentives to access zero-CapEx on-site solar and storage projects.

States and local governments have commonly used bond financing to support energy efficiency and renewable energy investments, suggesting that this may be a source of financing for ...

Recent weeks have seen a flurry of announcements concerning financing facilities for major solar and storage projects. Such schemes are extremely fashionable, particularly in ...

These EPA-backed facilities provide construction loans, credit enhancements, and term debt specifically
