Solar is at the heart of our mission to make the United Kingdom a clean energy superpower. It is one of the cheapest and quickest to build power sources we have.

Learn whether solar, wind or BESS offers the strongest UK planning prospects for 2026 and how to fast-track your renewable project.

Planning approvals for battery, wind, and solar projects in Great Britain (GB) have almost doubled over the past year, with more than 45GW of capacity approved in 2025 1. This ...

If approvals translate into shovels in the ground, the UK could see a marked rise in PV-plus-storage build over the next 24 months--smoothing the path to a cleaner, more ...

The energy capacity of new battery, wind, and solar projects that received approval climbed to 45GW this year, 96% higher than in 2024, according to data from Cornwall Insight.

Developers of battery storage have been attracted to Britain by the structure of its energy markets and the growth of wind and solar power, according to investors and analysts.

The Plan is a bold and comprehensive strategy that aims to secure a sustainable and resilient energy system for the UK by 2030. Through ambitious targets, significant ...

This plan will provide the foundation for the UK to build an energy system that can bring down bills for households and businesses for good.

The UK government is positioning its Clean Power 2030 policy as a plan to unlock GBP 40 billion (\$50 billion) of investment a year, creating thousands of jobs in the process.

The UK's new five-year energy plan commits over \$11 billion to rapidly expand wind, solar, and storage while aiming to create 10,000 jobs and accelerate national emissions ...
