---

In addition to renewable energy production, underground spaces can also be used as storage facilities for renewable energy. One promising technology is underground pumped ...

Our project, as featured in the Los Angeles Times, involves creating the world's largest underground energy storage facility. By compressing air underground, we store excess ...

The idea of storing compressed air underground as a renewable energy resource is not new. In fact, two plants in the world currently operate on ...

we've all circled a dimly lit parking garage while our phones die and EVs hunt for chargers. But what if these concrete giants could morph into 24/7 power plants?

As the demand for renewable energy continues to grow, the need for reliable and efficient energy storage solutions becomes ...

Underground energy storage works by utilizing geological formations to store surplus energy, which can be released back into the ...

Three Houston startups are using fracking-like techniques to create underground storage caverns for pressurized water, which when released drives a turbine to send power to ...

As the demand for renewable energy continues to grow, the need for reliable and efficient energy storage solutions becomes increasingly critical. Startups in Houston have ...

As cities look to harness zero-carbon power and heating, Enerdrape is offering a novel no-drill solution for geothermal energy. The heat held in New York's underground ...

The idea of storing compressed air underground as a renewable energy resource is not new. In fact, two plants in the world currently operate on this concept: the McIntosh CAES facility in ...
