How much does Uruguay's energy bill cost a year?

Even in years with average rainfall, costs could often skyrocket to \$1.1 billion a year. According to UTE, droughts and fluctuations in oil pricing threatened to more than double that, bringing Uruguay's annual energy bill to \$2.5 billion.

Is Uruguay a net importer of energy?

Once a net importer of energy, Uruguay now exports its surplus energy to neighbouring Brazil and Argentina. In less than two decades, Uruguay broke free of its dependence on oil imports and carbon emitting power generation, transitioning to renewable energy that is owned by the state but with infrastructure paid for by private investment.

Why did electricity prices drop in Uruguay?

Uruguay's energy grid became powered almost exclusively by domestic renewable sources, and consumer prices, adjusted for inflation, fell. "Electricity bill prices dropped substantially," said Alda Novell, a resident of Montevideo, by telephone. Today, Uruguay has more than 700 wind turbines distributed throughout its territory.

What percentage of energy is generated in Uruguay?

Hydroelectric accounted for nearly 56 percent of generation, wind 34 percent, bioenergy 6 percent, solar just under 3 percent, with fossil fuel coming in last at 2 percent. Wind energy came in second only to hydropower, accounting for nearly 34 percent of the energy generated in Uruguay that year.

Uruguay's now testing "second-life" EV batteries in storage containers. It's like giving retired Tesla batteries a pension plan--they get to chill in containers instead of landfills.

Cost Ranges: Solar storage battery costs vary widely, with lithium-ion systems priced between \$5,000 and \$7,000, while lead-acid options can be as low as \$200 to \$1,000.
