The Ha Tinh project aims to sidestep some grid issues by using Vietnam's first Direct Power Purchase Agreement (DPPA) model for combined solar and battery storage.

This paper provides a detailed analysis of the performance and economics of a 50 MW grid-connected solar power plant in Vietnam over a 4.5-year operational period from ...

This policy brief examines the emerging transmission challenges facing Vietnam in managing the increasing penetration of renewable energy.

Centralized photovoltaic (PV) projects paired with energy storage systems (like battery energy storage, or BESS) are at the heart of this transformation, driven by ambitious ...

As mentioned, the study selects a grid-connected SPP with a medium-scale capacity, representing the range of solar power capacities currently in Vietnam. The case ...

The BESS project aims to demonstrate the commercial viability of battery energy storage in Vietnam and showcase the practical benefits of renewable energy, including its reliability and ...

This presentation summarizes the analysis and key takeaways. CEIA-Vietnam's Co-leads Hang Dao and Tung Ho contributed significantly to the research of this study.

There are many types of energy storage technology with different applications in modern energy systems. This paper provides an up-to-date review of these storage ...

Viet Nam plans to develop large-scale energy storage systems as part of its strategy to stabilise its fast-growing renewable power grid and meet its net-zero emissions ...

There are many types of energy storage technology with different applications in modern energy systems. This paper provides an up-to-date review of these storage technologies and energy ...
