How can a battery pack sealant and gasketing adhesive help?

Fortunately, our battery pack sealing and gasketing adhesives can help. Based on silyl modified polymers (SMP), methyl methacrylate (MMA), Elastosol technologies for permanent sealants and butyl, CIPG, UVFG technologies for non-permanent sealants (serviceable), it becomes easy to address the latest trends while also overcoming common challenges.

Why do EV batteries need sealing & gasketing adhesives?

While assembling an EV battery pack comprised of various materials, as an automotive OEM and battery manufacturer, you know that the chosen sealing and gasketing adhesives play an important role for enclosure and it also helps to meet its overall performance and serviceability needs.

What are the different types of battery sealants?

Major adhesive and chemical manufacturing companies such as 3M, Parker Lord, and Henkel have jumped into the battery sealant and adhesive market with a variety of targeted products. Adhesives, sealants, gaskets, and thermal materials include polyurethanes, silicones, UV-curing materials, acrylates, and epoxies.

How do you protect a battery pack from moisture and dirt?

Preventing moisture and dirt from entering the battery pack is critical to avoid shorting out cells and modules that can cause damage and even thermal runaway and fires. Seals and gaskets must be able to withstand temperatures as low as -40°F and as high as 130°F.

With a diverse range of chemistries, including polyurethane, MMA, UV-acrylate, and epoxy, EV Bond technologies offer the optimal adhesive ...

Thermally conductive adhesives like epoxy, silicone, and polyurethane are used in EV batteries since they provide not only strong bonding but also efficient heat dissipation.

Looking for the right battery pack sealing and gasketing adhesives? Fortunately, our battery pack sealing and gasketing adhesives can help.

Integrating potting and encapsulation compounds into battery pack design increases performance, reliability, and long-term durability. ...
