Where is Madagascar's first power station?

The 10-megawatt Ambohimambola Station, east of Antananarivo, using diesel oil, was built in 2000. It was Madagascar's first foreign-owned power plant and is operated by the French electrical company Hydelec. Both power stations were still in operation as of 2024.

What is the largest electricity generation project in Madagascar?

The power station is the largest electricity generation project in Madagascar. The dam will be 60 metres (197 ft) high, creating a reservoir with a surface area of 6.7 square kilometres (3 sq mi). From the reservoir, water will flow through a pipeline that measures 716 metres (2,349 ft) long to arrive at the power house.

What are the main energy sources in Madagascar?

As of 2022, the primary energy sources for Madagascar were fossil fuels, hydroelectricity, biomass and waste, and solar power. Many individual households harvest wood for fuel, which has caused concerns over soil erosion, deforestation, and declining habitat for Madagascar's rich biodiversity.

What is the energy situation in Madagascar?

Madagascar, an island nation in the Indian Ocean, has a limited energy production capacity primarily reliant on hydroelectric power and fossil fuels. As of 2022, only 36.1% of the population had access to electricity, highlighting significant challenges in energy infrastructure and distribution.

Global South Utilities (GSU), a unit of Abu Dhabi's Resources Investment, has partnered with Madagascar's energy and hydrocarbons ministry to develop a 50-megawatt ...

Revised in June 2023, this map provides a detailed view of the energy sector in Madagascar. The locations of power generation ...

In recent years, there has been a growing interest in renewable energy in Madagascar, with several companies investing in hydro, solar, and wind power projects.
