---

Over the past two decades, more than 5 million U.S. households from California to Georgia to Maine have put solar panels on ...

Federal tax credits for rooftop solar, heat pumps and other energy-efficient technologies are going away at the end of the year. Here's what consumers should know.

Over the past decade, millions of solar panels have been installed on homes from California to Massachusetts. These solar panels ...

Over the past decade, millions of solar panels have been installed on homes from California to Massachusetts. These solar panels allow their owners to cut down on their bills, ...

Though solar represented just 3.4% of the nation's electricity generation in 2022, studies show that rooftop solar could eventually meet residential electricity demand in many ...

Though solar represented just 3.4% of the nation's electricity generation in 2022, studies show that rooftop solar could eventually meet ...

The elimination of US tax credits for residential heat pumps, solar panels and batteries will make electrifying your home more expensive in 2026, and tariffs and made-in ...

Solar panels don't suddenly shut down. They lose power gradually, year after year, until they're no longer pulling their weight. That's the real story behind solar panel lifespan.

Panel life depends on several factors, including climate, module type, and the racking system used, among others. While there isn't a specific "end date" for a panel per se, ...

Progress for solar in the United States was kicked into high gear by record-high tax credits for renewable energy, implemented in 2022 under the Inflation Reduction Act. Now, the ...

Understand the solar panel payback period and how long it takes to recover your investment. Learn what factors influence solar savings and ROI.

There is technically no expiration date on solar panels. However, over time, they naturally tend to become less efficient at producing energy. Some panels can also break due to physical ...
